connect:ID **Session Highlight**
Securing the Internet of Things

connect:ID, brought to you by the IBIA and SMP, is the foremost gathering of identity solutions experts. This year's event will be happening **April 30** through **May 2** here in **Washington, DC** and will tackle some of today's most pressing challenges. For example, securing the Internet of Things.

With 5G comes a new set of challenges involving a greater diversity of mission-critical IoT services and devices where high reliability is required. The session will discuss the vulnerabilities that these IoT devices pose, provide insight in to how the industry can partner to address these challenges, and focus on how securing new devices at the hardware level is essential to securing the overall system.

This session will take place on the third day of the conference at 2:40pm and will be moderated by **Darrell Geusz**, Senior Product Manager, Security, MicroStrategy. The discussion will be carried by senior-level executives, and experts in their own right, of some of the industry's biggest names. **Kabir Kasargod**, Senior Director, Business Development, Qualcomm Cyber Security Solutions will be joined by **Matthew Pruitt**, Chief Federal Solutions Architect, NEC Corporation of America, **Jatin Maniar**, VP, Products & Marketing, Nok Nok Labs, as well as **Kevin Gillick**, Executive Director, GlobalPlatform, to discuss the how we can secure the technologies of tomorrow and the networks that support them.

Registration for _connect:ID_ is still open >> www.connectidexpo.com/delegate-booking/
